(54) Title: THIENOISOXAZOLE PHENOXY UNSUBSTITUTED ETHYL AND PROPYL DERIVATIVES USEFUL AS D4 AN-**TAGONISTS**

(57) Abstract: The compounds are of the class of thienoisoxazole phenoxy unsubstituted ethyl and propyl derivatives, useful as D₄ antagonists. Said compounds are useful for the treatment of medical conditions mediated by inhibition of D₄ receptor. These conditions comprise, for example, Attention Deficit Hyperactivity Disorder, Obsessive-Compulsive Disorder, Psychoses, Substance Abuse, Substance Dependence, Parkinson's Disease, Parkinsonism, Tardive Diskinesia, Gilles de la Tourette Syndrome, Conduct Disorder, and Oppositional Defiant Disorder. A further aspect of the invention is to provide a pharmaceutical composition, intermediates, and a method of making said class of compounds.

INTERNATIONAL PRELIMINARY

International application No. PCT/US00/24949

EXAMINATION REPORT - SEPARATE SHEET

R Item III

Claims 78, 79 and 82-103 relate to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(i) PCT).

Re Item V

1) Reference is made to the following documents:

D1: WO-A-98 18797

- The subject-matter of present claims 1-109 is new (Article 33(2) PCT). 2)
- 3) The subject-matter of claims 1-109 involves an inventive step (Article 33(3) PCT).

D1, being regarded as closest prior art, discloses methoxyphenylpiperazine derivatives exhibiting antipsychotic effects (cf. title) The compounds of D1 bind to the D-2 dopamine receptor and contain a indolizinyl- an imidazo[1,2-a]pyridinyl-, a imidazo[1,2-a]pyrimidinyl-, a dihydroimidazo[2,1-b]thiazolyl- or a imidazo[2,1-b]thiazolyl-group (cf. claim 1)

The technical problem underlying the present application is seen in the provision of alternative antipsychotic drugs.

The problem appears to be solved (cf. pages 80-90).

The present compounds according to claim 1 in which R1 and R2 form a piperazinyl ring are closely related to the compounds of D1, differing in the thieno[2,3-d]isoxazol-ring from the compounds of D1 which contain a 6imidazo[2,1-b]thiazolyl-group.

The prior art does not prompt the skilled person to the present thieno[2,3d]isoxazol ring and, due to a different point of attachment, the modification can not be regarded as isosteric replacement. Therefore, inventive activity can be acknowledged.

International application No. PCT/US00/24949

EXAMINATION REPORT - SEPARATE SHEET

The claims 2-77 designate preferred embodiments and are therefore also inventive.

The claims 78, 79 and 82-107 relate to the use or the preparation of the inventive compounds. The claims 80 and 81 relate to compositions containing the compounds of claim 1. The claims 108 and 109 relate to intermediates in the preparation of the compounds of claim 1 and contain the thieno[2,3-d]isoxazolring. The said claims 78-109, therefore, also involve inventive activity.
